Improve Your Health and Lifestyle

Imagine your own peaceful, private escape filled with pure relaxation. Now imagine one that also benefits your lifestyle and promotes good health. Spas hot tubs are designed with your complete relaxation and rejuvenation in mind. In addition to providing instant stress relief, there are a number of lifestyle and health benefits associated with regular hot tub use, including:

Overall Well-Being

Unwind in the tranquility of soothing hot water as the therapeutic heat raises your body temperature, bolsters the immune system and triggers endorphins – the body’s natural pain blockers.

Arthritis Relief

Water buoyancy greatly relieves joints and muscles of constant pressure. According to the Arthritis Foundation, doctors recommend soaking in warm water before starting your day to help relieve the pain associated with arthritis. Additionally, warm water temporarily relieves stiffness and joint aches, increasing flexibility.

Soothing Pain Relief

When it comes to treating sore muscles, Hot tubs are designed to deliver targeted hydrotherapy to muscle groups to effectively relieve pain.

Improved Sleep

Hydrotherapy before bedtime may assist in getting a more restful night of sleep. The National Foundation recommends soaking in hot water before sleeping due to the associated calming effects. When exiting the spa, the body’s internal thermostat drops and signals the mind that it is time to sleep. Both effects result in a truly refreshed morning without the grogginess that sleep aids can leave behind.

Quality Time

Reconnect with friends and family in the most relaxing environment imaginable: Soaking in a hot tub at the heart of your Home Resort. Swap stories with friends while invigorating jets deliver the massage of a lifetime. Watch as the kids frolic under an illuminated waterfall. Light up the night with romantic LED lights for more intimate encounters.

Lasting Value

When you bring home a Spa hot tub, you create a daily oasis that you and your family can enjoy any time of the year. Not only is it a functional entertainment source, but the sleek design and smooth edges make your spa the centerpiece in your backyard or garden. Best of all, Spa hot tub may increase your property value without increasing your property taxes.

Owners already know this: by having a hot tub at home, kids start new sports activities, and in general, everyone spends more time at home. Have a hot tub and make sure yours is ready for action.

Prepare your hot tub for a trouble free functionig

- Is your spa cover in good shape or is it time for a replacement? Your spa cover prevents leaves and dirt from getting into the water, and it keeps the heat inside to conserve energy.
- Check the filters – replace them if needed, for maximum operating efficiency.
- Drain your spa for a thorough cleaning before serious winter weather sets in.
- Program your hot tub's water temperature so it's warm when you want to go in and in energy-saving mode at other times.

Why you need hydrotherapy

- Hydro-massage soothes sore muscles and strains, and promotes flexibility.
- A 10-minute soak relaxes homework-stressed kids, and parents.
- When the days get shorter, immerse in a warm-water massage instead of holding down the sofa – you'll probably sleep better afterwards.

People who own spas and hot tubs love to entertain outdoors in every season, too. Half-time during the game or last-minute Friday happy hour, you don't have to make a big deal out of it – everyone enjoys a warm soak and good conversation.

Prepare your hot tub for a trouble free functionig

Here are 5 simple tips to keep your hot tub's water clean, systems running smoothly, and everything looking new:

- Use only the best hot tub parts and supplies genuine products.
- Clean and replace your filters as needed.
- Remove leaves and debris from your hot tub cover and keep it clean. Ask your dealer about easy maintenance for your model's cover.
- Avoid going into the water with oils and heavy lotions on your skin – they can leave a film on the sides of the hot tub.
- Drain, clean and refill your spa every 3-4 months, depending on your usage.

The best hot tub breakthrough in easy water maintenance is the Water Purification System. It uses natural UV-C light technology and doesn't add any gas or chemical by-products to the water. You can cut down the amount of chemicals needed by about 50%, and it instantly kills up to 99% of water-borne bacteria. You can relax because the water's clear and fresh without a lot of work on your part.
